Telecon Report - RT-27

25X1A5a1

25X1A9a

1. On 16 December 1958, [REDACTED] Corporation, Philadelphia, Pennsylvania, advised by telephone that certain apparently minor equipment changes requested by [REDACTED] [REDACTED] and the writer on a visit to [REDACTED] on 12 November 1958 would cost more than \$2500 after overhead, G + A, and profit charges were added. He itemized this cost as follows:

25X1A5a1

25X1A9a

- |    |  |          |
|----|--|----------|
| a. | Reworking power supply interlock to control the AC line instead of the high voltage line.<br>(The transmitter interlock will remain in the high voltage line.) | \$376.00 |
| b. | Addition of a cam microswitch to the Hi-Z - Lo-Z switch on the antenna tuner to protect contacts while switching.  | 826.00   |
| c. | Low Speed keying terminals on back panel.  | 81.00    |
| d. | Leather strap to hold test set.  | 229.00   |
| e. | Additional jack on test set to read voltage directly with external probe.  | 155.00   |
| f. | Keying of cable connectors to avoid mis-connecting harness.  | 201.00   |
| g. | Moving 110-220 volt line switch from rear to front panel.  | 262.00   |
| h. | Replacement of knurled knob on crystal compartment with wing nut.  | 216.00   |
| i. | Replacement of toggle switch in VFO module with one shorter bat handle.  | 188.00   |

2. The contractor was asked to incorporate only changes (a), (c), and (f) into the initial prototype. He was told that a determination would be made during the laboratory evaluation of the RT-27 whether the additional changes listed are worth their cost.
